

In maths we like to explore lots of different types of questions. Every Christmas Mrs Carr sends us a letter, setting us a Fermi question. These are questions where we have to ask our own questions, use estimation and reasoning skills. They are ones where a seemingly impossible-to-calculate answer is estimated.

This year she has asked questions like:

1. How many truckles of cheese will fill the hall,
2. How far does Father Christmas have to walk to walk around the whole of our school
3. How many lights are on the Christmas tree?

During advent we will be working together to estimate and send Mrs Carr a reply.

I wonder what we will find.
